OBJECTIVE

AI Developer and Full Stack Engineer with hands-on experience building agentic AI systems, Retrieval-Augmented Generation (RAG) pipelines, and workflow automation using n8n, alongside strong foundations in React.js, Java/Spring Boot, and the MERN/MEAN stack. I specialize in integrating large language models (OpenAI, Claude, Gemini) into production applications — combining vector databases, hybrid search, and agentic tool-use with robust backend architecture and clean, responsive front ends.

I enjoy designing zero-cost and scalable automation systems, from webhook-driven AI workflows to self-hosted RAG assistants, and I bring the same rigor to testing, API validation, and clean code practices. I'm looking for a growth-oriented AI/Full Stack role where I can keep building impactful, enterprise-grade applications powered by modern AI tooling.

EDUCATION

The New College <i>Bachelor of Science in Computer Science</i>	<i>Chennai, Tamil Nadu</i> 2022 – 2025
Government Muslim Higher Secondary School <i>Higher Secondary Certificate (HSC)</i>	<i>Chennai, Tamil Nadu</i> 2021 – 2022
Government Muslim Higher Secondary School <i>Secondary School Leaving Certificate (SSLC)</i>	<i>Chennai, Tamil Nadu</i> 2019 – 2020

TECHNICAL SKILLS

Languages: Java, Python, JavaScript (ES6+)

AI / Automation: n8n workflow automation, Agentic RAG systems, LLM integration (OpenAI, Claude, Gemini), Hybrid search (BM25 + Vector), Prompt engineering

Frontend: React.js, HTML5, CSS3, Responsive UI Design

Backend Frameworks: Spring Boot, Node.js, Flask, FastAPI

Databases & Vector Stores: MySQL (SQL), MongoDB (NoSQL), Redis, Qdrant

API Development: RESTful APIs, Webhooks

Version Control: Git, GitHub

Testing & QA: Integration Testing, Postman (API Testing)

Developer Tools: VS Code, MongoDB Compass, IntelliJ IDEA, Docker

CERTIFICATIONS & TRAINING

Claude 101 — Course Completion Badge <i>Claude Academy</i>	<i>Sep 2026</i>
--	-----------------

- Completed an introductory course on effectively working with Claude AI, covering core concepts of prompt design and practical use of Claude for everyday and development tasks.

Full Stack Web Development Certification <i>Stepux Software Training and Job Assistance Center</i>	<i>Jan 2024 – Nov 2024</i>
--	----------------------------

- Built full stack applications using the MERN stack (MongoDB, Express.js, React, Node.js) and MEAN architecture, with focus on scalable and maintainable web application design.
- Developed Java and Spring Boot backend services with RESTful API design, implementing service layers, repositories, and MVC architecture for enterprise-grade applications.
- Designed and built responsive, pixel-perfect front end interfaces using React.js, implementing component-based architecture and modern JavaScript ES6+ features.
- Managed relational and non-relational databases using MySQL and MongoDB, including schema design, query optimization, and data modelling for efficient storage and retrieval.
- Applied Git version control for code management, branching strategies, and team collaboration across multiple projects.
- Conducted integration testing and API testing with Postman to ensure software quality and reliability.

PROJECT EXPERIENCE

Teams AI Mock Interviewer	<i>n8n, JavaScript, Web Speech API, Webhooks</i>
----------------------------------	--

- Built an interactive, web-based mock technical interviewer styled after Microsoft Teams, featuring real-time speech recognition, text-to-speech interviewer replies, and live audio wave visuals.
- Architected a webhook-driven pipeline where chat input and uploaded resume PDFs are routed to n8n workflows for resume parsing, conversation memory, and LLM-based question generation.
- Integrated an AI/LLM node (OpenAI, Claude, Gemini) within n8n to dynamically tailor interview questions to the candidate's resume and maintain session context.
- Implemented a structured real-time transcript log of the interview, rendering interviewer responses with synchronized speech synthesis and active-speaker visuals.

DocMind — Agentic RAG System with Multi-Source Ingestion *Python, Redis, Flask, Telegram Bot API, React*

- Built an agentic Retrieval-Augmented Generation system combining hybrid search (BM25 + vector search with weighted reciprocal rank fusion) for improved retrieval accuracy.
- Implemented multi-document ingestion pipelines supporting PDF, DOCX, web pages, and Telegram messages as knowledge sources.
- Designed agentic tool-use capabilities allowing the LLM to invoke document search, calculation, web search, and notification tools during reasoning.
- Added Redis-backed persistent conversation memory for contextual, multi-turn interactions, exposed via a REST API, Telegram bot, and a React dashboard.

ShopWave — Full-Stack E-Commerce Platform *React.js, Spring Boot, Java, MySQL, MongoDB, Stripe, JWT*

- Designed and developed a full-featured, production-ready e-commerce platform using React.js on the front end and Spring Boot (Java) on the back end with a clean MVC/REST architecture.
- Implemented JWT-based authentication with access/refresh token rotation and role-based access control (RBAC) for customer and admin privileges.
- Built product catalog, cart, and checkout flows with Stripe PaymentIntent integration, webhook-verified order confirmation, and an admin dashboard for product, order, and user management.
- Modeled relational schemas in MySQL and used MongoDB for reviews and activity logs, validating workflows end-to-end with Postman and integration tests.

Agentic RAG Assistant (Zero-Cost Stack)

n8n, Qdrant, Hugging Face, OpenRouter

- Built an autonomous RAG assistant using n8n as the orchestrator, querying custom vector embeddings from a Qdrant vector database via Hugging Face inference.
- Integrated an LLM router through OpenRouter (Llama, Qwen, and auto-routing) for reasoning over retrieved context, with window buffer memory for conversational continuity.
- Designed the entire architecture on free, open-source, self-hosted infrastructure, eliminating recurring hosting and API costs.

AI-Powered Support Ticket Classifier

Python, FastAPI, OpenAI, Pydantic

- Built a production-style support ticket classifier that categorizes issues, assigns teams, sets priority, and analyzes sentiment using an LLM with structured Pydantic outputs.
- Implemented system prompt hardening and prompt-injection detection with pattern matching and risk-based classification (low/medium/high/critical).
- Added automatic PII detection and redaction (emails, credit cards, phone numbers, SSNs) before any data reached the LLM.
- Built exponential-backoff retry/fallback handling, real-time token-based cost tracking, and multi-version prompt management (v1–v3) with A/B testing support.

CORE COMPETENCIES

AI & Agentic Systems – Building agentic RAG pipelines, LLM tool-use, and workflow automation with n8n

LLM Integration – Working with OpenAI, Claude, and Gemini APIs; prompt engineering and structured outputs

Full Stack Development – End-to-end web application development using React, Java, Spring Boot, and Node.js

Retrieval & Search – Hybrid search (BM25 + vector), vector databases (Qdrant), and embeddings

Database Management – SQL and NoSQL database design and query optimization with MySQL, MongoDB, and Redis

API Development – RESTful API and webhook design, development, and integration

Security & Authentication – Spring Security, JWT-based auth, PII redaction, and prompt-injection defense

Testing & Quality Assurance – Integration testing and API testing using Postman

Version Control – Git workflow, branching, and collaborative code management
